SUMMARY

B.Tech Computer Science student passionate about Artificial Intelligence, Machine Learning, and backend engineering. Building intelligent systems from multimodal RAG pipelines to code-mixed AI solutions. Currently exploring Edge AI, Small Language Models, and Code-Mixed ASR.

WHAT I DO

- Machine Learning: content-based recommenders, classification, regression pipelines
- NLP: text preprocessing, vectorization (BoW / CountVectorizer), cosine-similarity engines
- Data Analysis: exploratory analysis, cleaning, transformation, statistical insights
- Backend / Web: FastAPI, Flask, Streamlit apps, Bootstrap frontends
- Infra: Docker, MongoDB, PostgreSQL, Git, Linux

FEATURED PROJECTS

- CinemaPulse - Movie Recommendation Web App (Streamlit, NLP, cosine similarity)
- Email/SMS Spam Classifier App (Multinomial Naive Bayes)
- IPL Data Analysis 2008-2024 (Python, Pandas, Seaborn)
- Titanic Survival Predictor (Logistic Regression)
- Car Price Predictor (regression + UI) | Spotify 2024 / Netflix / E-commerce EDA

TECH STACK

Python | Go | Java | TensorFlow | PyTorch | FastAPI | Flask | Streamlit
Docker | MongoDB | PostgreSQL | Jupyter | Linux | Git | GitHub

INTERESTS

Edge AI | Small Language Models | Code-Mixed ASR | Multimodal RAG | Clean Code
